In the claims:

- 1 1. (Unchanged) A storage medium having stored therein a plurality of programming
- 2 instructions executable by a processor, wherein when executed, the programming instructions
- 3 implement a multi-media call application that effectuate quality of service (QOS) guaranty
- 4 for a packet based multi-media call (CALL) through call associated individual media stream
- 5 bandwidth control.
- 1 2. (Unchanged) The storage medium as set forth in Claim 1, wherein the programming
- 2 instructions determine if a sub-net bandwidth manager (SBM) that manages network
- 3 bandwidth is connected to a local area network (LAN) through which the CALL is
- 4 conducted, and if the SBM is connected to the LAN, register the CALL with the SBM and
- 5 reserve with the SBM bandwidth for subsequent allocation to media streams of the CALL.
- 1 3. (Unchanged) The storage medium as set forth in Claim 2, wherein the programming
- 2 instructions make the determination, registration and bandwidth reservation for subsequent
- allocation to media streams of the CALL as an integral part of establishing a connection for
- 4 the CALL.
- 1 4. (Unchanged) The storage medium as set forth in Claim 2, wherein the programming
- 2 instructions further subsequently cause the SBM to allocate the reserved bandwidth for the
- 3 CALL to individual media streams of the CALL.
- 1 5. (Unchanged) The storage medium as set forth in Claim 4, wherein the programming
- 2 instructions invoke a bandwidth reservation service to request the SBM to allocate the
- 3 reserved bandwidth for the CALL to individual ones of the media streams of the CALL,
- 4 providing call level information to the bandwidth reservation service to enable the bandwidth
- 5 reservation service to include the call level information in the requests for the SBM.

- 1 6. (Unchanged) The storage medium as set forth in Claim 5, wherein the programming
- 2 instructions invoke the bandwidth reservation service to request the SBM to allocate a
- 3 portion of the reserved bandwidth for the CALL to an individual media stream of the CALL
- 4 while establishing an individual channel for the individual media stream during the CALL.
- 1 7. (Unchanged) The storage medium as set forth in Claim 1, wherein the CALL is an
- 2 ITU-T H.323 compatible video conference call.
- 1 8. (Unchanged) The storage medium as set forth in Claim 7, wherein the programming
- 2 instructions further determine if a call level admission control gatekeeper is connected to a
- 3 local area network (LAN) through which the CALL is to be conducted, and if the call level
- 4 admission control gatekeeper is connected to the LAN, register the CALL with the call level
- 5 admission control gatekeeper, the registration being made in a manner that causes the call
- 6 level admission control gatekeeper to determine whether to admit the CALL into the LAN
- 7 without taking into consideration bandwidth requirement of the CALL.
- 1 9. (Unchanged) The storage medium as set forth in Claim 8, wherein the programming
- 2 instructions make the determination and conditional registration as an integral part of
- 3 establishing a connection for the CALL.
- 1 10. (Unchanged) A storage medium having stored therein a plurality of programming
- 2 instructions executable by a processor, wherein when executed, the programming instructions
- 3 implementing a bandwidth reservation service that requests a sub-net bandwidth manager
- 4 (SBM) to allocate a portion of reserved bandwidth for a packet based multi-media call
- 5 (CALL) to an individual media stream of the CALL, providing the SBM with call level
- 6 information to allow the SBM to associate the individual media stream of the CALL with the
- 7 reserved bandwidth of the CALL, the SBM managing network bandwidth of a local area
- 8 network (LAN) through which the CALL is conducted.

- 1 11. (Unchanged) The storage medium as set forth in Claim 10, wherein the
- 2 programming instructions request the SBM to allocate a portion the reserved bandwidth of
- 3 the CALL to the individual media stream of the CALL while establishing an individual
- 4 channel for the individual media stream during the CALL.
- 1 12. (Unchanged) The storage medium as set forth in Claim 10, wherein the
- 2 programming instructions are integral part of an operating system.
- 1 13. (Unchanged) The storage medium as set forth in Claim 10, wherein the CALL is an
- 2 ITU-T H.323 compatible video conference call.
- 1 14. (Unchanged) A method comprising:
- 2 (a) a multi-media call application first reserving bandwidth for media streams
- of a packet based multi-media call (CALL) at a call level with a sub-net bandwidth manager
- 4 (SBM) that manages network bandwidth of a local area network (LAN) through which the
- 5 CALL is to be conducted; and
- 6 (b) the multi-media call application subsequently causing the SBM to allocate the
- 7 reserved bandwidth for the CALL to individual media streams of the CALL, causing call
- level information to be provided to the SBM to enable the SBM to associate the individual
- 9 media streams of the CALL with the reserved bandwidth of the CALL.
- 1 15. (Unchanged) The method as set forth in Claim 14, wherein (a) is performed as an
- 2 integral part of the multi-media call application establishing a connection for the CALL.
- 1 16. (Unchanged) The method as set forth in Claim 14, wherein (b) comprises the multi-
- 2 media call application invoking a bandwidth reservation service to request the SBM to
- 3 allocate the reserved bandwidth for the CALL to the individual media streams of the CALL,
- 4 providing the bandwidth reservation service with call level information for inclusion in the

- 5 requests to enable the SBM to associate the individual media streams of the CALL with the
- 6 CALL.
- 1 17. (Unchanged) The method as set forth in Claim 16, wherein (b) is performed on a per
- 2 individual media stream basis as an integral part of establishing an individual channel for the
- 3 individual media stream.
- 1 18. (Unchanged) The method as set forth in Claim 14, wherein the method further
- 2 comprises (c) the multi-media call application determining if a call level admission control
- 3 gatekeeper is connected to the LAN while establishing connection for the CALL.
- 1 19. (Unchanged) The method as set forth in Claim 18, wherein if the call level
- 2 admission control gatekeeper is connected to the LAN, (c) further comprises the multi-media
- application registering the CALL with the call level admission control gatekeeper in a
- 4 manner that causes the gatekeeper to determine whether to admit the CALL into the LAN
- 5 without taking into consideration bandwidth requirement of the CALL.
- 1 20. (Unchanged) An apparatus comprising:
- a storage medium having stored therein a plurality of programming instructions
- 3 implementing a multi-media call application that effectuates quality of service (QOS)
- 4 guaranty for a packet based multi-media call (CALL) using call associated individual media
- 5 stream bandwidth control; and
- a processor coupled to the storage medium that operates to execute the programming
- 7 instructions.
- 1 21. (Unchanged) The apparatus as set forth in Claim 20, wherein the programming
- 2 instructions determine if a sub-net bandwidth manager (SBM) that manages network
- bandwidth is connected to a local area network (LAN) through which the CALL is

- 4 conducted, and if the SBM is connected to the LAN, register the CALL with the SBM and
- 5 reserve with the SBM bandwidth for subsequent allocation to media streams of the CALL.
- 1 22. (Unchanged) The apparatus as set forth in Claim 21, wherein the programming
- 2 instructions make the determination, registration and bandwidth reservation for subsequent
- 3 allocation to media streams of the CALL as an integral part of establishing a connection for
- 4 the CALL.
- 1 23. (Unchanged) The apparatus as set forth in Claim 21, wherein the programming
- 2 instructions further subsequently cause the SBM to allocate the reserved bandwidth for the
- 3 CALL to individual media streams of the CALL.
- 1 24. (Unchanged) The apparatus as set forth in Claim 23, wherein the programming
- 2 instructions invoke a bandwidth reservation service to request the SBM to allocate the
- 3 reserved bandwidth for the CALL to individual ones of the media streams of the CALL,
- 4 providing call level information to the bandwidth reservation service to enable the bandwidth
- 5 reservation service to include the call level information in the requests for the SBM.
- 1 25. (Unchanged) The apparatus as set forth in Claim 24, wherein the programming
- 2 instructions invoke the bandwidth reservation service to request the SBM to allocate a
- 3 portion of the reserved bandwidth for the CALL to an individual media stream of the CALL
- 4 while establishing an individual channel for the individual media stream during the CALL.
- 1 26. (Unchanged) An apparatus comprising:
- a storage medium having stored therein a plurality of programming instructions
- 3 implementing a bandwidth reservation service that requests a sub-net bandwidth manager
- 4 (SBM) to allocate a portion of reserved bandwidth for a packet based multi-media call
- 5 (CALL) to an individual media stream of the CALL, providing the SBM with call level
- 6 information to allow the SBM to associate the individual media stream of the CALL with the

- 7 reserved bandwidth of the CALL, the SBM managing network bandwidth of a local area
- 8 network (LAN) through which the CALL is conducted; and
- a processor coupled to the storage medium that operates to execute the programming
- 10 instructions.
- 1 27. (Unchanged) The apparatus as set forth in Claim 26, wherein the programming
- 2 instructions request the SBM to allocate a portion the reserved bandwidth of the CALL to
- the individual media stream of the CALL while establishing an individual channel for the
- 4 individual media stream during the CALL.
- 1 28. (Unchanged) The apparatus as set forth in Claim 26, wherein the programming
- 2 instructions are integral part of an operating system.
- 1 29. (Unchanged) A network comprising:
- 2 a first client computer;
- a medium coupled to the first client; and
- a second client computer, coupled to the medium, that effectuates quality of service
- 5 (QOS) guaranty for a packet based multi-media call (CALL) to the first client computer
- 6 through call associated individual media stream bandwidth control.
- 1 30. (Unchanged) The network as set forth in Claim 29, further comprising:
- a subnet bandwidth manager (SBM), coupled to the medium, that manages the
- 3 bandwidth of the network.

- 1 31. (Unchanged) The network as set forth in Claim 30, wherein the second client
- 2 computer comprises:
- a multi-media application that effectuates the QOS guaranty; and
- a network bandwidth reservation service that requests the SBM to allocate a portion
- of reserved bandwidth for the CALL to an individual media stream of the CALL, providing
- 6 the SBM with call level information to allow the SBM to associate the individual media
- 7 stream of the CALL with the reserved bandwidth of the CALL, the SBM managing network
- 8 bandwidth of a local area network (LAN) through which the CALL is conducted.
- 1 32. (Unchanged) The network as set forth in Claim 31, wherein the network bandwidth
- 2 reservation service, provides the SBM with call level information to allow the SBM to
- 3 associate the individual media stream of the CALL with the reserved bandwidth of the
- 4 CALL.
- 1 33. (Unchanged) The network as set forth in Claim 30, further comprising:
- a gateway coupled to the medium;
- a gatekeeper coupled to the medium; and
- a router coupled to the medium..
